Visit management module that allows the registration and control of visitor access to a company.

Characteristics

Innux Visitor allows you to add or remove tabs, such as the "companies" tab in this case, so that they can visit the entity and keep a record of them (image above). It also allows consulting the detailed registration of visitors and respective data of the company to which they belong and editing them (image below).

- Innux Visitor is a comprehensive solution for the control and management of visitors, offering maximum security in the process of receiving your visitors. The best way to receive someone is to transmit security and innovation to them. In order to quickly and quickly know different information about visitors in real time or in a more detailed analysis, relevant data about visits and what was visited.

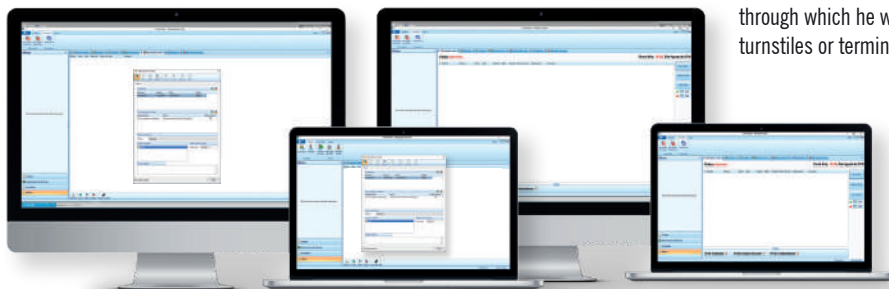

An integrated solution with various identification equipment, thus allowing for a global management of visits in any entity. The Innux Visitor software / solution is certified by the Portuguese Software Association (ASSOFT)

Innux Visitor allows you to create reasons for visiting the site. The customer can add as many as they need, consult them whenever necessary.

Innux Visitor allows you to fill in the tab for booking a visit. The visitor's name is entered and a card is assigned to the visitor. The employee to be visited is chosen, the reason for the visit and the access area through which he will pass, in case he has to swipe his card through turnstiles or terminals to open a door in a certain access area.

It also features a visits panel where you can see the number of visits taking place as well as information on entry time, reason, department and employee to be visited, thus keeping all the details of the visit in progress.

All information is subject to change without prior notice, given the constant evolution of the product. Innux is not responsible for any errors or omissions in this document.
